

team¹

Design system for brand, imagery, and presentations

Built for clarity and momentum

The system pairs a black technical canvas with disciplined typography, signal-red emphasis, and authentic community imagery. Every element should feel precise, confident, and active.

Core foundations

Use every presentation consistently

01

Grid + glow

02

Kanit + Inter

03

Real imagery

Team1 is the master brand

team¹

Local chapters

Use approved regional marks only for local programs. Keep them visually separate from the Team1 master identity.

Legacy programs

Ambassador DAO marks are historical references, not the current Team1 identity. Do not combine them into new lockups.

Primary identity

Lead with the Team1 wordmark. On black, keep the wordmark white and the "1" in signal red.

Color carries the hierarchy

#000000

Canvas black

#FFFFFF

Primary text

#FF394A

Signal red

#F5384B

Theme accent

#161618

Elevated surface

#E84142

Avalanche red

Typography creates the rhythm

Display — Kanit Medium

Use at 32 pt for slide titles. Center it on foundational slides; align left when it leads a story.

Heading — Kanit Medium

Use at 17–18 pt in red for modules, callouts, and card titles. Keep labels short and direct.

Body — Inter

Use at 13–14 pt in white with 112–118% line spacing. Inter SemiBold supports numbers, captions, and footers.

Background & atmosphere

The technical canvas

Start with the inherited black grid. It gives every slide structure without becoming the primary read.

Use soft red edge glows, a fine perimeter frame, and small corner anchors to add energy and depth.

Graphic devices stay modular

Use the source icon family consistently

- Use outline icons for metrics, regions, and programs
- Center glyphs inside square fields
- Keep one line weight across a set
- Use signal red or white glyphs
- Reserve gradients for chapter tiles
- Keep official chapter artwork unchanged
- Keep partner marks source-authentic
- Size tiles as a modular 3×4 family
- Use the compact Team1 mark for owned tiles
- Pair one icon with one short label
- Do not mix illustration styles
- Do not draw substitute logos

Photography should feel lived-in, not staged

Choose proof of community: real rooms, builders, rituals, and shared work.

Document participation

- Favor candid, people-first moments over polished stock imagery.
- Show context—spaces, artifacts, talks, and collaboration—not just posed groups.
- Pair a wide community scene with one branded detail crop. Preserve true colors and avoid heavy filters.

A small set of layouts goes further

Cover & bumper

One central mark, one concise statement, and generous negative space.

Foundations

Centered title with one visual principle and restrained copy.

Split story

Use a 40/60 or 50/50 split for text paired with one decisive image.

Metrics

Group 3–6 measures; let large red numerals carry the primary read.

Editorial grid

Use three columns for sequences, capabilities, or structured comparisons.

Photo mosaic

Fill the canvas with real community proof; avoid decorative stock.

Contrast separates signal from support

Signal

Use red for the claim, metric, or action that must be seen first.

Keep the surface near-black and the copy concise.

- One primary emphasis
- High contrast
- Large, direct language

Support

Use white for evidence, detail, and narrative context.

Let spacing—not extra colors—create the hierarchy.

Dark panels are reserved for comparisons, warnings, and decision points.

Keep the system disciplined

Decorating every corner

Use the grid and glow as atmosphere. More effects reduce legibility and authority.

Turning every line red

Reserve red for emphasis. White carries the story; red should be the fastest read.

Mixing type styles

Use Kanit for display and modules, Inter for body. Avoid improvised weights or extra fonts.

Using generic stock

Use authentic Team1 and community imagery. Avoid staged tech clichés or synthetic brand marks.

Build with the Team1 system

Start from an inherited layout

- Keep the grid, frame, and corner glows
- Use only approved Team1 source assets

Choose the right pattern:

- | | | |
|---------------|------------------|---------------|
| • Cover | • Comparison | • Moodboard |
| • Foundations | • Editorial grid | • And more... |
| • Split story | • Photo story | |
| • Metrics | • Call to action | |

Everything stays editable
